

## The Bermuda Triangle ( Draft 3)

Kathy Tse Core A, December 8th 2014

Have you ever heard about the Bermuda Triangle or otherwise known as the devil's triangle? The Bermuda Triangle is a strange triangle that when most ships or planes pass through, they disappear. The Bermuda Triangle is located in Atlantic Ocean and it falls between Bermuda, Puerto Rican and Florida. Over the past five centuries, there was more than 1,000 planes and ships that have disappeared when they pass through. There are many theories about the Bermuda Triangle ; however, I believe that the main reason why most planes and ships disappear when they go past there is because of crazy weather patterns, like hurricanes and **S**watersprouts.

One theory is about UFO's and Aliens trapping planes and ships in the Bermuda Triangle. On October 11th, 1492 at 10:00 pm , Christopher Columbus said, " I notice a bright light glimmering when I was passing through, and my compass was acting strangely." What Christopher Columbus said could mean that UFO's do pass through the Bermuda Triangle and they might even have the ability to manipulate the compass. Another example is an eye witness on John F. Kennedy's sailing boat. On 1971, there was a documentary reporting that there was a sailor who caught sight of a UFO in the Bermuda Triangle. Lastly, some people believe that once in a while, a UFO comes and go ; and they would also trap planes and ships in the Bermuda Triangle. However, on the other hand some **S**peopel don't agree with this theory because **G**the don't believe in UFO's.

The second theory is about crazy weather patterns. According to National Ocean Service, **S**NOAA reported that there is a gulf stream in the Bermuda Triangle and that gulf stream is 300 times faster than the gulf stream in the Amazon river. A gulf stream is a water current that goes so quickly that causes bad climate **S**weather to occur. Some of the crazy weather patterns could be a hurricane or a water sprout. However, **S**NOAA believes that it's not just any ordinary hurricane and water sprout. They think that the gulf

stream in the Bermuda Triangle causes hurricanes and water sprouts to come and go in a blink of an eye that even a satellite can't detect it. The hurricanes and the water sprouts are extremely powerful. The **S**watersprouts could suck up sea water to the sky and damage planes. **G** Not only this but, **hurricanes** are so powerful that they can make swirling storms and drown the ships. On the other hand, some people don't believe that crazy weather pattern is the cause of planes and ship's disappearance.

To summarize, it is my belief that crazy weather patterns is one of the most reasonable theory. This is because in the world there are so many different countries that have more natural **S**diasters than others. **G** For example **Japan**. According to USGS (World Earthquake), it has been said that Japan has more earth quakes than Hong Kong. Also in Florida **G**, there is more **tornadoes** than **S**HK. Therefore, I believe that the Bermuda Triangle is an area where has more special weather issues. For example, the powerful hurricanes and water sprouts, they could come and go so quickly that even human's eye can't see it happening. In addition, I don't believe in the UFO theory because first of all there isn't a lot of information and evidence to support this theory, however it's just an **S**intersting and unique theory.

The Bermuda Triangle mystery is so popular because when planes and ships goes past that area, most of them disappear and **G**till now they haven't **really find a** solution to this. I think that this mystery might be solved if **S** **technonlogy** improves. For example, if airlines and ships allows people to have phone access. I believe by doing this, the mystery could be solved. This is because if you are on a plane that is crossing the Bermuda Triangle area and all of a sudden, something you see happens before the plane collapsed, you can immediately call to tell the person on the phone what is happening. Also, If I could travel back in time to find out about something that may or can cause planes and ships to disappear, I would take lots of photos of the Bermuda Triangle to see if there are any clues.
