

! while != \_\_. ! function vs the if and else statement.

Count: function?  
Global integer  
How would we we count?

End: global functions: play again!

How would I use for files?

define function.  
global: ✓

ex: How much do you know penguins.

```

while
input: "How many species of penguins are there?"
if answer == "18"
input: (print: good job! more on! press 2.)
else:
  (similar to the guess the number game)
  if else:
    more on
    if:
    else:
  global thing:
  code.
else:
  print:
  
```
